4898. SOSZKA A. I. Klin. Chor. Wewn. A. M., Warszawa, "Bespośredni wpływ przetaczania krwi na czynność nerek. Direct influence of blood transfusions on the kidney function POL. ARCH. MED. WEWNĘT. 1956, 26/8 (1219-1224)

In view of the anxiety spread among some of the clinicists concerning blood transfusion in kidney diseases, and of the uncertainty as to the fate of the kidneys in cases treated with blood transfusions - the kidney function was examined in 25 such cases: in 9 cases of kidney diseases and in 16 cases of other diseases without lesions in the kidneys, viz. in 5 cases of liver, gallbladder and stomach diseases, in 3 cases of chronic myeloid leukaemia, in 3 cases of Addison Biermer's disease and in 5 cases of secondary anaemia in the course of some other disease. Pre-conserved blood or blood cell mass was transfused. There were no important clinical complications in any of those cases. To investigation were submitted: the period before blood transfusion and the period after it. Glomerular filtration and tubular reabsorption were determined by the endogenic chromogenic test with Poper-Mandel-Meyer's method in Orlowski's modification; the urea level in the blood was determined and the general examination of the urine performed. The investigations showed that after blood transfusion: (1) both the blood urea level and the glomerular filtration did not undergo any significant change; (2) tubular reabsorption in cases with healthy kidneys has a decreasing tendency; it is not, however, an essential feature; (3) tubular reabsorption in cases of kidney dis-

4898

CONT.

eases undergoes an inconsiderable, but essential decrease; (4) in the results of the general urine examination no essential differences are noted; (5) blood transfusion not only has no direct harmful influence on the functional state of the kidneys, but has a beneficial influence on the general state of the patient and on the course of the disease.

TITLE: Possibilities of applying laser techniques to exploding wire
experiments

SOURCE: Postepy fizyki, v. 17, no. 4, 1966, 403-419

TOPIC TAGS: exploding wire, laser application, plasma physics

ABSTRACT: A review of recent (mostly American) work on exploding wires is presented. The review is based on the Chace-Levine classification of slow, supersonic, and ablative explosion types (Chace, W. G. and Levine, M. A., J. Appl. Phys., 31, 1298, 1960). In addition to a discussion of some of the unexplained aspects of the phenomenon, attention is also given to various methods of investigating exploding wire plasma by means of lasers. An experiment is described in some detail in which two lasers are used to study the process of an exploding metal cylinder. The author concludes that the use of laser techniques should clarify many problems dealing with 1) the optical properties of metal vapor at very high particle concentrations; 2) the time and the mechanism of the

Card 1/2

L 43685-66
ACC NR: AP6030481

shock-wave formation in dependence on the density of the medium in which the wire is located; 3) the moment when the vapor turns into a plasma; 4) the properties of a wire plasma (electron and ion temperature, the concentration of particles of different sign, pressure, etc.); 5) the kind of wire plasma radiation; and 6) the occurrence of collective motions of the particles in the wire plasma, i.e., the dynamics of the terminal state of the explosion. Sorobabashko po poluprovodnikovym materialam. Moscow, 1957

Vopros metallurgii i fiziki poluprovodnikov: Issled. 3-60 sovetskikh i zraniy. (Problems in the Metallurgy and Physics of Semiconductors: Transactions of the Third Conference) Moscow, Izd-vo Akad. Nauk SSSR, 1959. 129 p. Errata slip. Issued. 1,200 copies printed.

Sponsoring Agency: Akademy Nauk SSSR. Institut metallurgii i metallofiziki. 4, A. M. Gorkogo, 117, Moscow. Ed.: V. D. Arkinov, Doctor of Chemical Sciences; M. A. Mironov, Publishing House: V. V. Zolotov.

PURPOSE: This collection is intended for technical and scientific personnel concerned with the investigation and production of semiconductor materials. It may also be used by students in schools of metallurgy.

CONTENT: The collection contains reports submitted at the Third Conference on Semiconductor Materials held at the Institute of Metallurgy, Izhevsk, Ural, on May 1957. The reports deal with problems of obtaining and investigating germanium, silicon, and semiconductor compounds. The collection was first edited by D. I. Petren, Doctor of Technical Sciences. "Treatment of Ulcers and Slow-Healing Wounds
"Grafting," N. G. Sosnyakov, G. M. Afanas'yeva,
I. G. Khokhlova, Clinic of Gen Surg, First
Leningrad Med Inst imeni I. P. Pavlov, 5 pp

"Vest Khirurgii" Vol LXVIII, No 4

Reviews history of subject. Describes own methods.
Concludes that local application of chemically
treated tissue by Krauz's method to slow-healing
wounds is technically simple, and can be used
on ambulatory cases. The use of amniotic
membrane as grafting material in treating slow-
healing wounds is most convenient for
it can be easily obtained from maternity houses
and the donors as a rule have been checked for
syphilis, malaria, etc.

AUTHOR: Berdyyev, T., Active Member of the AS of the Turkmen SSR, Sosonkin, I. L., Candidate of Philosophical Sciences

TITLE: Inter-Vuz Scientific Conferences (Mezhvuzovskiye nauchnyye konferentsii) Questions of Education are Discussed (Obsuzhdayutsya voprosy vospitaniya)

PERIODICAL: Vestnik Vysshey Shkoly, 1957, # 8, pp 66-67 (USSR)

ABSTRACT: Questions of ideological-political education of students are discussed at the Turkmenian University (Turkmeniskiy universitet) by the entire teaching personnel, at the annual scientific-methodical conferences.
The following 3 questions were discussed at last year's conference: 1) Students' course work (lecturer I.A.Kalamina, Candidate of Philological Sciences), 2) Some questions on student esthetic education (lecturer Ye.I.Stepanova, Candidate of Pedagogical Sciences, and 3) Student scientific-atheistic education (lecturer: S.I.Ruzhitskaya, instructor).
On the second point, the lecturer suggested that esthetic education be given more varied forms: frequent lectures on
